# JavaScript Questions

I post multiple choice JavaScript questions on my Instagram **stories**, which I'll also post here! Last updated: **June 12th**

From basic to advanced: test how well you know JavaScript, refresh your knowledge a bit, or prepare for your coding interview! 💪 🚀 I update this repo regularly with new questions. I added the answers in the **collapsed sections** below the questions, simply click on them to expand it. It's just for fun, good luck! ❤️

▼ Answer

**Answer: C**

Because of the event queue in JavaScript, the `setTimeout` callback function is called *after* the loop has been executed. Since the variable `i` in the first loop was declared using the `var` keyword, this value was global. During the loop, we incremented the value of `i` by `1` each time, using the unary operator `++`. By the time the `setTimeout` callback function was invoked, `i` was equal to `3` in the first example.

In the second loop, the variable `i` was declared using the `let` keyword: variables declared with the `let` (and `const`) keyword are block-scoped (a block is anything between `{ }`). During each iteration, `i` will have a new value, and each value is scoped inside the loop.

- B: `[1, 2, 3, 11]`
- C: `[1, 2, 3, 7 x empty, 11]`

- D: `SyntaxError`

▼ Answer

**Answer: C**

When you set a value to an element in an array that exceeds the length of the array, JavaScript creates something called "empty slots". These actually have the value of `undefined`, but you will see something like:

```
[1, 2, 3, 7 x empty, 11]
```

depending on where you run it (it's different for every browser, node, etc.)

#### 38. What's the output?

```
(() => {
  let x, y;
  try {
    throw new Error();
  } catch (x) {
    (x = 1), (y = 2);
    console.log(x);
  }
  console.log(x);
  console.log(y);
})();
```

- A: `1` `undefined` `2`
- B: `undefined` `undefined` `undefined`
- C: `1` `1` `2`
- D: `1` `undefined` `undefined`
